San Diego Solar helps people take control of their energy future

As solar energy becomes more accessible to more residents and businesses, San Diego Solar has been there to meet customer needs and help shape the future of energy. In a Q&A, CEO Curtis Williamson discussed trends in solar over the years, the company’s founding and its philosophy for customer service.

Q. How has demand and public interest in solar changed in California over the more than 30 years the company has been in business?

Williamson: Solar in California has seen a lot of ups and downs. Early systems cost three to four times what they do today, and they were all designed around charging lead-acid batteries. Then came the first wave of grid-tied systems — expensive, but paired with large state rebates. Since then we’ve gone through the transition from Net Energy Metering 1 to NEM 2 and now to Net Billing 3, plus all the disruption tied to foreign manufacturing and tariffs, including materials held at port and released just in time to complete large installations. The industry always seems to bounce back, because it fundamentally works and people believe in their energy future. At its core, this business is about helping people reach their goals, and that makes it a genuinely fun industry to be in.

Q. What are some key considerations for people thinking about going solar?

Williamson: The most important thing is choosing the right contractor. A lot of companies have come and gone in this industry over the years, and a lot of the good ones remain. Homeowners should choose someone they trust — someone who will design a system that meets their needs now

and as those needs grow over time.

Q. What does San Diego Solar offer that customers might not get from national chains or other companies?

Williamson: Most of our conversations with customers center on where they see their homes in five to 10 years. Are they planning to add an electric vehicle, a heat pump AC unit, or an electric water heater? Are they focused on backup power, or more on peak shaving and utility bill optimization? No two customers are the same, and no two solar arrays are designed the same. At San Diego Solar, we ask a lot of questions and listen closely to what our customers want, then build a system that actually fits them.

Q. What challenges and opportunities did you see when you took over as CEO this year?

Williamson: I’ve been working with the Hosmer family, who founded San Diego Solar, since 2012. The original company started in 1996 and was later incorporated as San Diego Solar in 2012. They’re great people who have taught me a lot about solar and this industry. The Hosmers remain close friends and we still surf together on occasion.

One of the biggest challenges has been the perception that people “missed the boat” on going solar. That couldn’t be further from the truth — there are more

solar programs available now than ever, and in many cases solar is cheaper and easier to get into than it was one, two, or even five years ago. When we walk people through the process, the investment, and the payback, the reaction is almost always, “Wow, this is a great deal!”

The other thing we’ve noticed is how many systems in San Diego are now 10, 15, even 25 years old — some of them systems we installed ourselves. We’re talking with customers, and with other companies’ former customers, about repairing and upgrading those systems. That can be challenging, since older technology has been replaced by smaller, faster components. But we want people to know they have someone reliable to call when a panel or inverter needs fixing, so they can get the most out of their investment over the long haul.

Q. Does the company have any particular short- or long-term goals?

Williamson: Short term, we’d like to see the market stabilize the way other home services industries have. Long term, we want to move into solar-led whole-home electrification. A lot of homeowners are considering heat pumps and electric water heaters that integrate with their solar arrays, and we’d love to be at the forefront of that shift in home services.

finished object itself. The challenges, frustrations, and unexpected turns encountered along the way become essential elements of the work, making each sculpture an experiment in form, thought, and expression,” according to the press release.

Perry and fellow featured artist sculptor Peter Mitten were frequent collaborators of the iconic San Diego sculptor James Hubble (Hubble himself had roots in Rancho Santa Fe with a studio on his mother’s property in his early years

and doing the artwork for historic The Wishing Well Hotel that used to be on Lago Lindo in the 1960s).

As a sculptor, Mitten is fascinated by the architectural possibilities of box construction. His Cartons series featured in the Oolong exhibit “exemplifies his ongoing investigation into structure, space and meaning.”

“Recent Work” includes emotional “psychological landscape” paintings by Carol Perry and Lauri Koseff’s paintings, which explore themes of spirituality and nature — symbolic imagery in her work includes abstracted baskets, birds of prey, land-

scape and halos.

Digital artist Barry Mastro’s one-of-a-kind playful and vibrant digital paintings are printed directly onto aluminum while Nadine Baurin’s pieces are created in a medium of molten beeswax, tree resin and pure pigment. Her semi-abstract paintings draw inspiration from the Pampas grasslands of her native Argentina and California’s coastal landscape.

Artist Les Perhacs’ works represent a 60-year career in bronze, steel and stone sculpture. “Whether distilling animal forms to their essential rhythms and elegance or

exploring movement and geometry through his celebrated Chaos Series, his sculptures reveal an extraordinary balance of craftsmanship, innovation, and design,” according to the press release.

Since the Aug. 5 opening, new work from the artists has been added each Wednesday, offering visitors a changing view of the exhibition each week.

Visit Oolong Gallery at 6030 La Flecha, Rancho Santa Fe, on Wednesday through Sunday from 11 a.m. to 5 p.m. Private appointments can be made on Monday and Tuesday. For more visit <https://oolonggallery.com>
